# EXHIBITION INFORMATION

---

Discover the story behind Tinker, a Tyrannosaurus rex skeleton discovered in South Dakota. Tinker the T-Rex is a 1,000 square-foot exhibition featuring a casting of the most complete juvenile T. rex, four hands-on exhibits and a collection of genuine fossils. This exhibition provides a great opportunity to study the build and athletic prowess of a young T. rex.

## FACT SHEET

---

### 1. T-REX BITE

T-Rex had the most powerful bite of any animal to ever walk the planet. At over 10,000 pounds of pressure, a full grown T.rex's bite could crush nearly any bone.

### 2. T-REX SPEED

Because of its size, T-rex probably did not run very fast. Adults grew as large as 15,400 pounds! Running faster than 20 miles per hour would have shattered T.rex's bones.

### 3. T-REX TEETH

An adult T.rex had 60 saw-edged, or serrated teeth. T.rex grew new teeth to replace lost or broken ones.
